

DELIVERING NATURE-POSITIVE SOLUTIONS

We are **ecosulis**

We are dedicated to recovering nature, by designing and delivering efficient and scalable nature-based solutions for people and planet.

Wetland Specialist

We have extensive experience restoring rivers, ponds and creating new wetlands. We have expertise in nutrient mitigation and natural flood management.

Practical Restoration

We not only design, but also deliver practical nature recovery projects at scale across the UK. This enables us to create cost-effective nature-based solutions.

Efficient Biodiversity

Following scientific rewilding principles, we minimise interventions and maximise biodiversity by capitalising on nature's capacity to heal itself in a balanced ecosystem.

"Ecosulis provided outstanding ecological consultancy, playing a fundamental role in our end solutions."

"Ecosulis delivered maximum value for money - the team went above and beyond the scope of work on numerous occasions."

What **ecosulis** do

We offer both consulting and practical services, with expertise in habitat creation and restoration.

AREAS OF EXPERTISE

Coastal Restoration

We have expertise in restoration of seagrass, oyster bed, saltmarsh, mangrove and coral reef habitats.

Ecosystem Analysis

Our advanced metrics and scientific expertise allow us to offer industry-leading measurement and analysis.

Habitat Creation

We design and create wetlands, woodland and grassland, using scientific rewilding principles.

Nature Recovery & Rewilding Plans

We design and deliver nature recovery and rewilding management plans for organisations and landowners.

Peatland Restoration

We have expertise in designing and delivering peatland restoration projects.

Wetland/River Restoration

We restore rivers, ponds and wetlands, applying natural flood management principles and reducing nutrients.

EXTRA SERVICES

Ecological Surveying

Alongside our core services, we offer existing clients ecological monitoring, linked to our ecosystem analysis.

ICWs

We design nutrient-neutrality compliant wetlands which treat river and waste water.

Maintenance

We deliver active rewilding across our sites to continue boosting biodiversity after an initial intervention.

Rewilding Advisory

We consult on rewilding strategy for charities and national organisations, providing practical scientific advice.

CASE STUDIES

We work with clients to identify nature-based solutions that deliver high biodiversity gains on sites across the UK and beyond, with minimal interventions. By crafting these solutions to fit the site, we cost-effectively deliver high quality results that stand the test of time.

Natural Capital Mapping

We partnered with satellite mapping provider, 4EI, to produce tree planting opportunity and biodiversity maps to guide Nottingham City Council's land management.

Rewilding Plan

We created a rewilding vision document to guide nature recovery on an Irish equestrian estate - Castle Leslie. This involved extensive research into the estate and local ecology.

River Restoration

At Kingshurst Brook in Birmingham, Ecosulis restored an urban stream, implementing natural flood management features and installing a fish pass.
